

GEDCOM Parser Project – Conversation Recap & Forward Plan

This PDF is the reset reference for the GEDCOM Parser Project. It summarizes the current system state, architectural direction, and concrete next steps without requiring prior context.

Authoritative Next Steps

1. Lock the PostgreSQL place resolution schema.
2. Integrate GeoNames candidate generation with the canonical place tables.
3. Implement unresolved-place queries to support review workflows.
4. Defer UI and API expansion until data workflows are proven.
